

Flannery, Kent V. 1976. Sampling on the regional level. In, *Early Mesoamerican Village*, edited by K.V. Flannery, pp. 131-136, 159-160. Academic Press, NY.

What is the Real Mesoamerican Archaeologist's view of sampling? Identify the type of sampling method he uses and the strengths and weaknesses of this method as pointed out in the article and discussed in class.

What problem orientation might justify the use of RMA's type of sampling? In other words, what is the RMA really interested in knowing about that would lead him to see his particular sampling method as the appropriate one to use?

What is the Skeptical Graduate Student's view of sampling? Identify the type of sampling method he uses and the strengths and weaknesses of this method as pointed out in the article and discussed in class.

What kind of questions could you answer if you used the SGS's type of sampling instead of the RMA's type of sampling?

Extra Credit

What type of archaeology (CH, CR, CP) would you guess RMA and the SGS do? Why?
